Venkat Siva

Full Stack Developer | Angular| React.js| Next js | IONIC| Java | Spring Boot

+91 9966223198| thallasiva786@gmail.com | linkedin.com/in/siva-thalla-2b03641a7 | github.com/thallasiva | Hyderabad, India

PROFESSIONAL SUMMARY

Seasoned Full Stack Developer with 8.3+ years of experience, specializing in frontend development with Angular and React.js, Next.js, and experienced in Java backend development using Spring Boot, Spring Security, and RESTful Microservices. Proven ability to deliver end-to-end web and mobile applications across healthcare, SaaS, HRMS, and content management domains.

Frontend expertise covers modern Angular 20 with Signals, NgRx, and RxJS and React.js patterns (Hooks, Redux Toolkit, React Query, Context API), Next.js rendering strategies (SSR, SSG, ISR) delivering high-performance Single Page Applications, Progressive Web Apps, and enterprise-grade UIs optimized with Code Splitting, Lazy Loading, and Web Vitals best practices.

Java backend experience includes designing scalable Spring Boot architectures and microservices, building secure REST APIs using Spring Security, JWT, and OAuth 2.0, implementing banking workflows such as customer onboarding, account management, NEFT/RTGS/IMPS fund transfers, beneficiary management, transaction processing, and statement generation. Experienced in managing relational databases using Spring Data JPA and Hibernate, and developing Spring Boot microservices for notifications, integrations, and background processing. Comfortable working across the full stack—from database design and API development to responsive, pixel-perfect frontend implementation.

Additional capabilities include cross-platform mobile development using Ionic, Capacitor, and Cordova (published on Google Play Store and Apple App Store), AI integration using OpenAI APIs, Lang Chain, and RAG, and real-time features via Firebase. Proficient in Docker, GitHub Actions CI/CD, AWS, and production monitoring with Sentry, Datadog, and New Relic.

A reliable team contributor who actively participates in Agile/Scrum ceremonies, mentors' junior developers, leads code reviews, and consistently delivers clean, maintainable, and scalable code on schedule.

TECHNICAL SKILLS

Frontend (Primary)	React.js, Next.js 14, Angular 20, TypeScript, JavaScript ES6+, HTML5, CSS3, Tailwind CSS, Bootstrap, Redux Toolkit, NgRx, RxJS, React Query, Zustand, Apollo Client, GraphQL, Material-UI, Angular Material
Java Backend	Java 8/11/17, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, JWT, OAuth 2.0, RBAC, Swagger/OpenAPI, JDBC, Maven
Backend Services	Spring Boot Microservices, REST APIs, JavaMailSender, Scheduled Jobs, Modular Architectures
Databases	MySQL, MongoDB, Hibernate ORM, Spring Data JPA, Spring Data MongoDB, Query Optimization, Indexing
Mobile	Ionic Framework, Cordova, Capacitor, Android, iOS, Firebase (Auth, FCM, Crashlytics, Analytics, Remote Config)
Performance	SSR/SSG/ISR (Next.js), Lazy Loading, Code Splitting, Tree Shaking, React.memo, useMemo, useCallback, OnPush CD, Web Vitals
Testing	JUnit 5, Mockito, Jest, Cypress, E2E Testing, API Testing (Postman)
DevOps / Cloud	Git, GitHub Actions, AWS, Vercel, CI/CD Pipelines, Vite, Webpack, Turborepo
AI & Monitoring	OpenAI API, Lang Chain, RAG, Vector Databases, Prompt Engineering, Sentry, Datadog, New Relic, Lighthouse
AI-Assisted Dev	GitHub Copilot, ChatGPT, Claude AI — code generation, debugging, documentation, code review

WORK EXPERIENCE

Senior Software Engineer | Nat IT Services Pvt Ltd | Hyderabad *May 2024 - Present*

- Leading full stack development of an HRMS platform (React.js, Next.js, Java) covering Employee Management, Payroll, Leave & Attendance, and Performance Appraisal modules.
- Previously delivered Instant Polls — a real-time polling SaaS platform built with React.js, Next.js, Java 17, and Spring Boot Microservices with OpenAI integration.

- Implemented RBAC security with Spring Security, JWT, OAuth 2.0, OTP, and 2FA; developed Spring Boot microservices for notifications and integrations.
- Containerized services with Docker; set up CI/CD via GitHub Actions; monitored production with New Relic.

Senior Software Engineer | HTC Global Services | Chennai *Apr 2023 - Nov 2023*

- Delivered HCP Asia — an enterprise healthcare project management platform using React.js, Next.js, TypeScript, Spring Boot, and PostgreSQL.
- Implemented SSR, SSG, and ISR with Next.js; built Spring Boot REST APIs secured with JWT, OAuth 2.0, and RBAC.
- Optimized frontend performance via Code Splitting, Lazy Loading, and Tree Shaking; monitored with Sentry and Datadog.

Senior Software Developer | SLK Software Pvt Ltd | Bangalore *Nov 2021 - Apr 2023*

- Built Missions Connect — a subscription content platform using Angular 20, Java, Spring Boot, MongoDB, and MySQL.
- Implemented Angular Standalone Components, Signals, NgRx, and RxJS; integrated OpenAI, LangChain, RAG, and blockchain certification via IPFS.

Mobile Application Developer | Soniks Services Pvt Ltd | Hyderabad *Aug 2020 - Nov 2021*

- Developed The Camp App — cross-platform solution using Angular 20, Ionic, Capacitor, Cordova, and React.js for Android, iOS, and web.
- Published on Google Play Store and Apple App Store; integrated Firebase Auth, FCM, Crashlytics, and Analytics.

Junior Software Developer | Versatile Commerce Pvt Ltd | Hyderabad *May 2019 - Apr 2020*

- Built frontend features for e-commerce apps using Angular, TypeScript, and REST APIs; contributed to performance optimization and component development.

Mobile Developer | 2K Services Pvt Ltd | Chennai *Sep 2017 - May 2019*

- Built Ionic/Angular/Cordova mobile apps for Android and iOS with push notifications, offline storage, and Firebase integration.

KEY PROJECTS

Project 1: Instant Polls — Real-Time Polling SaaS Platform

Tech Stack: *React.js, Next.js, TypeScript, Redux Toolkit, Recharts, Java 17, Spring Boot Microservices, Spring Security, MySQL, Docker, GitHub Actions, New Relic, OpenAI API*

Description:

Developed an enterprise-grade SaaS polling platform that enables organizations to create, publish, manage, and analyze polls in real time. The platform provides live voting insights, AI-powered question generation using the OpenAI API, interactive analytics dashboards, and secure role-based access for Admins, Customers, Resellers, Staff, and Voters. Built using microservices architecture with real-time data processing, scalable APIs, and CI/CD pipelines to ensure high performance, security, and reliability.

Roles & Responsibilities:

- Developed responsive frontend using React.js, Next.js, TypeScript, Redux Toolkit, and Tailwind CSS with a reusable component library.
- Built Java 17 + Spring Boot REST APIs for polls, voting, user management, and reporting — covering core Java concepts including OOP, Collections, Streams, and Exception Handling.
- Implemented Spring Data JPA and Hibernate for CRUD operations across Polls, Users, Roles, Voting, and Reports with MySQL schema and query optimization.
- Designed RBAC security using Spring Security, JWT, OAuth 2.0, OTP, and 2FA for 5 user roles (Admin, Customer, Reseller, Staff, Voter).
- Implemented caching, pagination, and lazy loading to improve dashboard performance for large datasets.
- Integrated OpenAI API for AI-assisted poll question generation; developed Spring Boot microservices for email notifications and background jobs.
- Built a Spring Boot AI service that sends aggregated poll responses to the OpenAI API to generate result summaries and key-trend insights for admins on the analytics dashboard.
- Applied AI-based sentiment analysis to open-text voter responses, classifying feedback as positive, neutral, or negative and visualizing results in Recharts.
- Built real-time analytics dashboards with Recharts; generated downloadable PDF and Excel reports.
- Containerized with Docker; deployed via GitHub Actions CI/CD; monitored production using New Relic.

Project 2: HRMS — Human Resource Management System

Tech Stack: *React.js, Next.js, TypeScript, Redux Toolkit, Tailwind CSS, Java 17, Spring Boot, MySQL, JWT, OAuth 2.0, REST APIs, GitHub Actions*

Description:

Developing an enterprise-level Human Resource Management System (HRMS) that automates end-to-end HR operations, including employee onboarding, employee management, payroll, leave, attendance, performance management, and recruitment. Implemented a Resume Parser to automatically extract candidate details such as personal information, skills, work experience, education, and contact details from uploaded resumes, reducing manual data entry and improving recruitment efficiency. The application provides secure role-based access for HR Admins, Recruiters, Managers, and Employees, ensuring efficient and centralized HR operations.

Roles & Responsibilities:

- Designing and developing the full stack application using React.js, Next.js, TypeScript, and Tailwind CSS for the frontend with Java 17 and Spring Boot for backend REST APIs.
- Building Employee Management module covering employee onboarding, profile management, department assignment, role configuration, and offboarding workflows.
- Developing Payroll & Salary module with salary structure configuration, automated payroll processing, payslip generation, tax calculation, and downloadable salary report's in PDF format.
- Implementing Leave & Attendance module with leave request workflows, approval chains, holiday calendars, attendance tracking, and leave balance management.
- Building Performance & Appraisal module with goal setting, periodic review cycles, manager feedback workflows, rating systems, and appraisal history tracking.
- Implementing multi-role access control with JWT authentication and RBAC for HR Admin, Manager, and Employee roles with protected route handling.
- Designing MySQL database schema for employees, departments, payroll, leave policies, and appraisal records with optimized queries and indexing.
- Building reusable UI components, form validations, and dynamic dashboards for HR analytics, headcount reports, and payroll summaries.
- Setting up CI/CD pipelines using GitHub Actions for automated builds, testing, and deployment workflows.

Project 3: HCP Asia — Healthcare Project Management Platform

Tech Stack: *React.js, Next.js, TypeScript, Tailwind CSS, Spring Boot, Spring Security, PostgreSQL, Redux Toolkit, React Query, Sentry, Datadog, Docker, GitHub Actions*

Description:

Developed an enterprise healthcare collaboration platform to streamline secure workflow management, document sharing, task coordination, and project tracking across distributed teams. Implemented secure role-based access for Admins, Project Managers,

Translators, Recruiters, and External Project Managers, ensuring efficient collaboration, data security, and regulatory compliance. Built scalable REST APIs and integrated monitoring, logging, and CI/CD pipelines to deliver a reliable and high-performance application.

Roles & Responsibilities:

- Built scalable React.js and Next.js frontend implementing SSR, SSG, and ISR for improved page load performance and SEO.
- Developed Spring Boot backend REST APIs using Spring MVC, Spring Data JPA, Hibernate, and PostgreSQL for project workflows, document management, and notifications.
- Implemented Spring Security with JWT and OAuth 2.0 for authentication; designed RBAC with role-based route protection.
- Built complex multi-step forms with Formik, React Hook Form, and Yup; managed state with Redux Toolkit, React Query, and Zustand.
- Developed secure document upload and download functionality with role-based authorization and audit tracking.
- Optimized application performance through lazy loading, code splitting, memoization, and API caching techniques.
- Monitored with Sentry, Datadog, and Lighthouse; optimized bundle via Lazy Loading, Code Splitting, and Tree Shaking; deployed via Docker and GitHub Actions.

Project 4: Missions Connect — Digital Content Management Platform

Tech Stack: *Angular 20, TypeScript, NgRx, RxJS, Tailwind CSS, Java 17, Spring Boot, MongoDB, MySQL, OpenAI API, LangChain, RAG, IPFS (Pinata), Chart.js, JWT, OAuth 2.0*

Description:

Developed a subscription-based digital content platform for schools, corporate organizations, and Aboriginal communities. Implemented secure media management, blockchain-based content certification, Stripe payment integration for subscription billing, and analytics dashboards to monitor user engagement and content performance, ensuring a secure and scalable content delivery platform

Roles & Responsibilities:

- Developed Angular 20 enterprise frontend with Standalone Components, Signals, NgRx Store, and RxJS for reactive state management.
- Built Java Spring Boot REST APIs for content management, subscriptions, user management, and notifications with modular architecture.
- Integrated Stripe payment gateway for secure subscription management, payment processing, and transaction handling.

- Implemented lazy loading, route-level code splitting, and image optimization to improve application performance.
- Integrated OpenAI APIs, LangChain, RAG, Semantic Search, and Vector Databases for AI-powered chatbot features.
- Integrated blockchain content certification using IPFS (Pinata); built Chart.js dashboards and JavaMailSender email services.
- Collaborated with product owners and UX teams to deliver scalable, user-friendly features.

Project 5: The Camp App — Cross-Platform Camp Management

Tech Stack: *Angular 20, Ionic, Cordova, Capacitor, React.js, TypeScript, Tailwind CSS, Firebase (Auth, FCM, Crashlytics, Analytics, Remote Config), REST APIs*

Description:

Developed a camp management solution with a React.js web application and an Angular + Ionic mobile application for Android and iOS. The platform supports camp registrations, medical records, invoice processing, document management, and real-time notifications. Integrated Firebase services for authentication, push notifications, analytics, crash reporting, and remote configuration to enhance security and application performance.

Roles & Responsibilities:

- Developed cross-platform mobile app using Angular 20, Ionic, Cordova, and Capacitor; built companion web app with React.js and Tailwind CSS.
- Implemented Firebase Auth (Google, Facebook, OTP), FCM push notifications, Crashlytics, Analytics, and Remote Config.
- Built native mobile features via Capacitor/Cordova plugins; developed PDF report generation for medication, camp summaries, and invoices.
- Developed native mobile features using Capacitor and Cordova plugins, including camera, file upload, local storage, and push notifications.
- Implemented offline data synchronization and retry mechanisms to improve user experience in low-connectivity environments.
- Monitored application stability using Firebase Crashlytics and Analytics to identify and resolve production issues.
- Published on Google Play Store and Apple App Store with full signing, provisioning, and version management.

EDUCATION

Bachelor of Computer Science | Vikrama Simhapuri University, Nellore | 2015
